# Sponsors

*About This Particular Macintosh* has been free since 1995, and we intend to keep it that way. Our editors and staff are volunteers with *real* jobs who believe in the Macintosh way of computing. We don't make a profit, nor do we plan to. Our aim is to produce a fiercely independent magazine, with multiple formats designed for easy reading rather than showing ads. The views expressed in these pages have always been our own, and to help prove it we do not accept direct sponsorships or advertising. We do, however, need to pay for our Web site and other expenses, so we rely on minimal advertising, sold indirectly via Google and Yahoo, as well as the support of ATPM readers who shop using [our links](#).

# Welcome

by Robert Paul Leitao, [rleitao@atpm.com](mailto:rleitao@atpm.com)

Welcome to the October issue of *About This Particular Macintosh!* Summer has given way to fall, and as the leaves change color we're taking this issue to change the normal structure of our monthly *Welcome*.

ATPM has been in continuous publication since early 1995. This is the fourth presidential election cycle the publication has witnessed, the third CEO of Apple, and the fall and rise of the company has occurred during our watch. In that time more than one-half dozen distinct processor classes have entered and exited Macintosh computers, and our editorial span has encompassed the demise of the Newton and the ascent of the iPod and iPhone as both personal digital devices and cultural phenomena.

At the moment our [first issue](#) was distributed, the Resolution Trust Company was still mopping up from the last major financial crisis to beset our nation from shore to shore. As much as things change, many things have also remained the same. Technologies will change, but the human desire for information, entertainment, and the occasional diversion from the challenges of life remains as a constant.

ATPM is intended to be always relevant but often irreverent. We make no apologies, and we enjoy what we do. This publication is written and distributed with you in mind. When the headlines turn ugly and the news seems grim, just remember we've all been here before. This time around some of the more interesting technologies are just a bit different and the occasional diversions a bit more fun.

In this month's issue we begin our iPhone app roundup. The writer of this column has a newfound favorite in [Shazam](#), a free iPhone app that will find the song names and artists for music one enjoys, sourced from the sound coming from one's car radio or home stereo. Shazam listens to the music, checks the music against a database, and reports back the song name and artist.

Please enjoy our October issue. No matter the news and the serious nature of the current political debates, ATPM is here today and will be with you tomorrow to celebrate the personal computing experience.

Our October issue includes:

## **MacMuser: Ding Dong Dell**

Mark Tennent wants to know what purpose Dell's new Studio Hybrid serves.

## **Next Actions: Master List for October**

Ed Eubanks Jr. updates his master list of GTD applications.

## **Photoshop for the Curious: Don't Reset—Preset!**

Photoshop provides countless means of customization to make user workflows become as efficient as possible. This month, learn how to create presets for new documents and tool settings.

## **Desktop Pictures: South Korea and Guam**

Reader Robert Foster provides this month's images from South Korea and Guam.

## **Cartoon: Cortland**

Angie is reunited with the love of her life as we come to the end of Cortland. Or do we...?

## **Review: Democracy 2**

Running a nation is easier than you think.

## **Review: Imprint Studio 1.0**

Imprint Studio easily makes the pieces for you to assemble into posters. You just need to provide time and patience.

## **Review: iPhone App Roundup**

Lee Bennett and Ed Eubanks Jr. kick off ATPM's inaugural installment of iPhone application reviews.

## **Review: Whoomp Earbud Enhancers**

Finally, a product for Tag Team to endorse...15 years too late.

## Making Preview Useful Again

1. Another trick I use all the time is Command-N after copying whatever from wherever. That gets you an image with what you had in the clipboard. Then save as PDF, PNG, TIFF, etc.
2. Another useful PDF manipulation: crop works, too.

—*Charles Parnot*

I have not found any manuals for Preview. I'd love to convince Apple or someone else to create a power user manual for Preview. I keep learning more about it, but always in dribs and drabs. *Mac OS X Leopard: The Missing Manual* by David Pogue has a section on Preview, but it is less than nine pages long. A recent [UsingMac article](#) covers some Preview power features, but the nicely illustrated Web page is far from comprehensive.

Could a Preview manual be profitable? Are there many users who would pay \$10–\$15 for a Preview manual?

—*Gregory Tetrault*

## iPhone App Roundup, GTD

Am I nuts? Why doesn't Apple's iPhone support synchronizing with Apple's iCal's To-Dos?! I use them for a very fast, very simple GTD application. This seems like a major oversight.

—*Matt*

You aren't nuts. I'd wager more than 90% of iPhone users are stumped as to why Apple has not integrated To-Dos from iCal into the iPhone. Wide speculation suggests it will come, but of course Apple never gives timelines for when features will be added.

—*Lee Bennett*

## Das Keyboard Professional

I had the same key-mapping issue when I started using my [unicomp customizer](#), which has an awesome mechanical key action.

However, I found that by changing the modifier key default keymappings and individual keyboard key mappings, and rebooting, I eventually got it to a state where the settings were retained when switching from one keyboard to the other.

You should experiment a bit with the settings; you may find that it will work for you after all.

—*Ray Boehmer*

## **Hard Drives as Floppies**

As for speed, I ran a round of tests on a Western Digital WD5001ABYS drive using [QuickBench](#). For small files (under 1 MB), eSATA beat FireWire 800 by about 2× for reads and 3× for writes. For large files (20–100 MB), by about 40% for reads and by roughly 3× for writes.

I see from the screen shots I saved that “write cache purging” was not enabled for these tests, so that may explain the odd write disparity, though why it should only speed up SATA access is puzzling.

Regarding the RTX100H-Q (a “hardened” version of the RTX100-Q)—I’ve been using a pair of these for a couple months now, and am quite happy with them. My entire universe—boot partition and data partitions—are on a 500 GB SATA drive I plug into one RTX100H-Q at home, and into a second at work. I boot from the RTX100H-Q at work (via FireWire 800); at home I boot from an internal 10,000 RPM drive (a Western Digital Raptor) that’s automatically cloned to the external drive’s boot partition each night. And I do my system updates when I’m at home.

## **Text Parsing With FileMaker**

I cannot thank you enough for putting up such a clear, concise, and understandable article on how to separate out names from within a full name field. I have a database with over 1,000 records and was thinking about doing it by hand.

I searched the Net and most of the hits were “Buy a subscription and I’ll tell you how to do it.” I would have paid someone to help, but those sites looked a bit fishy.

Then I ran into yours. Thank you, once again, for empowering me. You have no idea how thrilled I am that I could do this—though to many it would seem so simple.

You rock!

—*Steve Herzberg*

## **Kinesis Advantage Pro**

I use two Advantage Pro MPC/USB keyboards on two Mac machines, and I’ve had three of the older PS/2 connector models used with Linux. Every single one of these got or gets

stuck keys (Control, Shift, Meta). This is extremely annoying in the Emacs editor. I would have abandoned Kinesis years ago if there were any alternative with as good ergonomics. Very comfortable to use and very flaky with stuck keys.

The suggestion by Kinesis that this is a rare problem is not true. Five out of five of my keyboards from them have had this problem, on different machines and operating systems. No other keyboard I ever used on these same machines has this problem. The Kinesis keyboard electronics or firmware are poorly engineered, and you will encounter stuck keys if you hold down modifier keys a lot as with the Emacs editor.

## **Grandma's Life as a Video Star**

Thanks for the great article! What a wonderful idea you have to create DVDs of you reading books to your grandkids!

—*Shayne Packer*

Thank you for sharing exactly how you make these storytime DVDs for your grandchildren. I have had a similar thought to do so, and I like very much how you accomplish the task.

I, too, am a MacNana.

—*LdsNana*

## **Harman Kardon Soundsticks II**

Buddy, you are on crack.

If half the world had the sort of passion and attention to detail with their job that you have with yours, I could only imagine what sort of world we'd be living in right now.

We'd all be flying emission-free cars with wickedly crisp sounding speakers, no doubt!

Thanks for the review.

*We'd love to hear your thoughts about our publication. We always welcome your comments, criticisms, suggestions, and praise. Or, if you have an opinion or announcement about the Macintosh platform in general, that's OK too. Send your e-mail to [editor@atpm.com](mailto:editor@atpm.com). ## Ding Dong Dell

Well done, Dell! Congratulations for catching up only eight years late. The new [Studio Hybrid](#) looks the business, but one has to ask, what is it for?

Dell's new box of tricks is similar in size and appearance to an external hard drive. Its removable coloured sleeves are presumably the hybrid part of the name. When Apple's [Cube](#) went on sale in 2000, many found it hard to believe the little white box wasn't just a power supply, but they were comparing it against PCs at the turn of the millennium. With the Studio Hybrid, Dell probably has the [Mac mini](#) in their sights, both computers with similar internal specifications and prices.

The computers' Core 2 Duos are looking long in the tooth, and both are limited to 4 GB of memory. Integrated graphics won't get gamers excited, and internal storage space limits the computers to one drive and one CD/DVD reader/writer. A reviewer on Dell's Web site says they purchased the Studio Hybrid as a media player, a role the Mac mini is aimed at as well. The Studio Hybrid and Mac mini have a similar range of ports to connect external

devices, which is lucky because modern digital media takes up enormous quantities of disk space, making their hard drives look cramped for space.

As soon as monitors, keyboards, input devices, and all the other paraphernalia of modern computing are added to them, they take up a lot of space and power sockets. All-in-one computers such as Apple's [iMac](#) look a better bet, especially as they are more proficient computers, albeit for an extra couple of hundred quid. An iMac can also be moved from room to room dragging only one lead behind it.

Alternatively, laptop computers, which Apple and Dell manufacture in a broad range, would fill the media centre role without being tied to one location or even to a power supply. The higher end versions have usurped desktop computers for many users.

What exactly is the Studio Hybrid for? It's too low-powered, limited in performance by integrated graphics and CPU, lacks upgrade options, and is hampered by needing to connect to a monitor, keyboard, and power supply.

But it does have a range of coloured sleeves.

## Don't Reset—Preset!

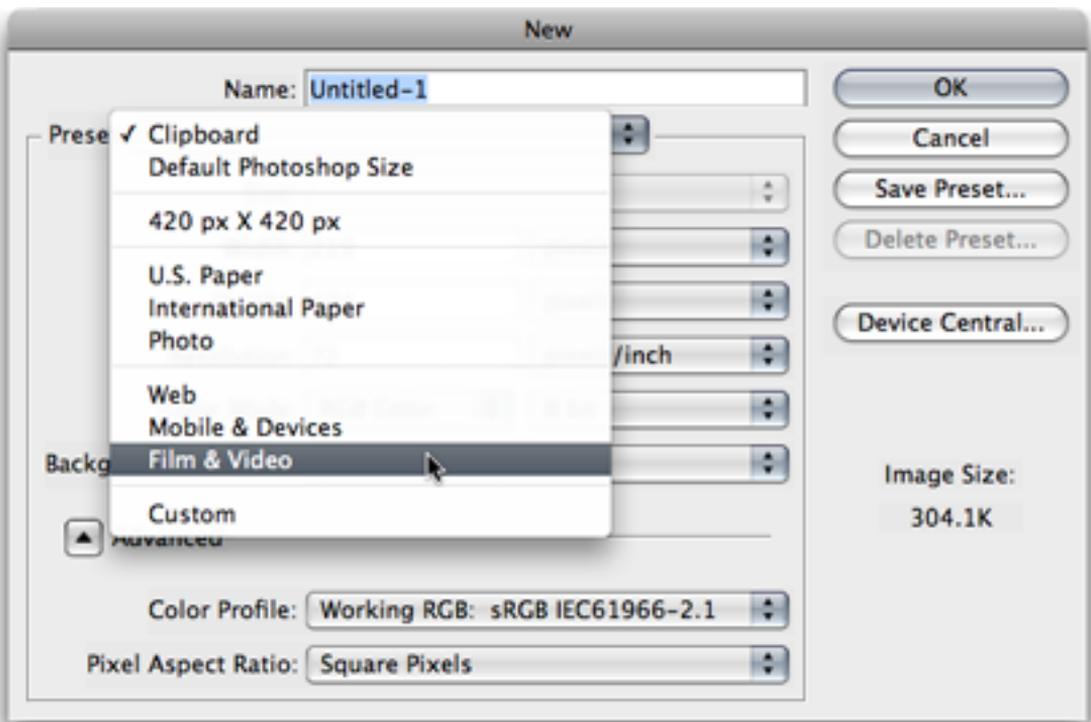

Multi-hundred-page books could probably be written and still not cover every way in which Photoshop can be customized to speed up a designer's workflow. Yet, Photoshop newcomers may not realize even the simplest ways to create presets for tasks they routinely perform. This month, I'm going to reveal two of my favorite types of presets for Photoshop.

### New Document Presets

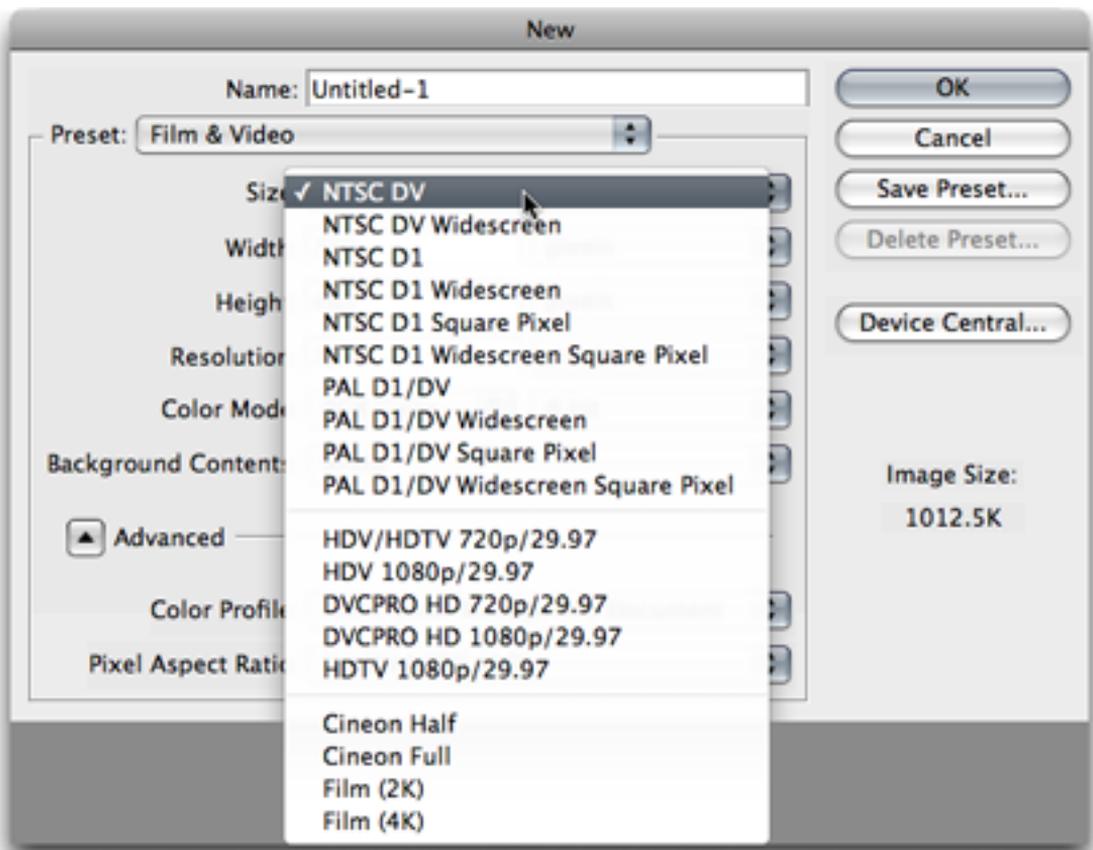

Setting up a new document is something most people probably rush through because they'd rather get started actually designing. Thus, it's easy to miss that Photoshop allows a designer to save the settings for a new document for easy retrieval.

In my work, I create Photoshop images that begin life as one of a seemingly infinite number of sizes, resolutions, color modes, etc. However, there is one configuration I often define. Whenever I am working on a video editing project, invariably, there'll be a spot where I want to bring in a full-screen graphic created in Photoshop.

I work with standard definition NTSC DV video. This type of video needs full screen graphics that are 720 pixels wide by 480 pixels tall at 72 pixels per inch. Since I set up new Photoshop documents with these specifications very often, I can let Photoshop fill in these values for me at the time I create the document. For this particular configuration, a preset is already available by default. Here's what it looks like:

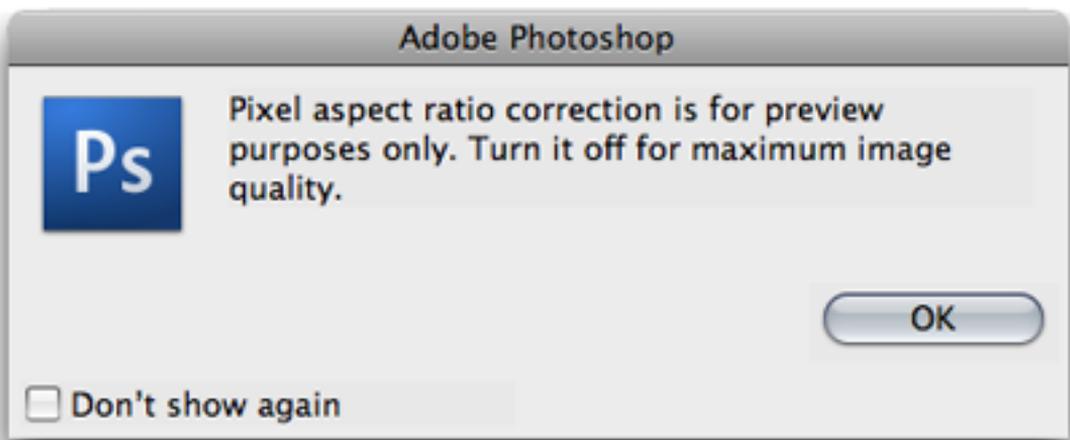

Photoshop includes several new document presets with settings frequently used by many Photoshop designers. Here, I'm using the Film & Video category.

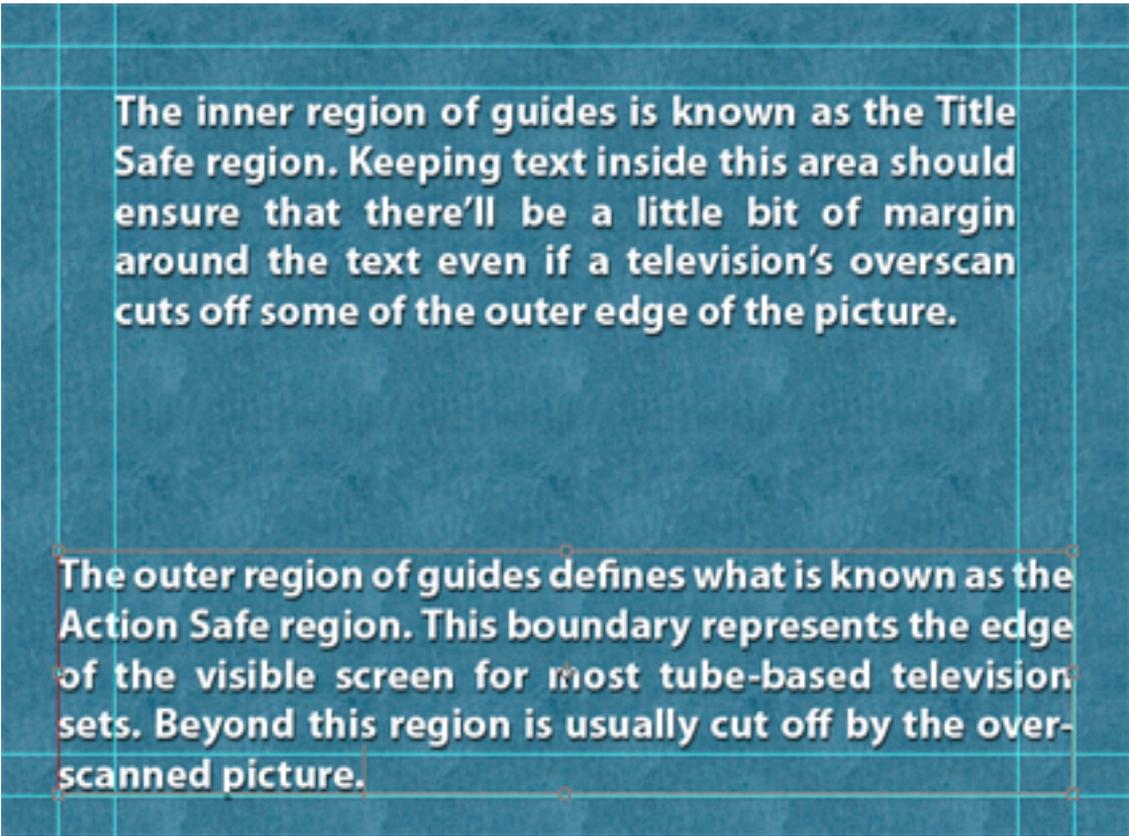

The Size pop-up menu is essentially a subcategory to the presets. I've selected NTSC DV.

Having chosen the desired preset for DV video, Photoshop automatically fills in the settings for a  $720 \times 480$  document at 72 pixels per inch, RGB 8-bit color mode, no color management, and the standard pixel aspect ratio for DV video which is 0.9.

Pixel aspect ratio correction is only a preview feature which approximates proper dimensions that will appear on a television monitor. Photoshop warns designers that this feature is for preview purposes only. The document will save properly even though the aspect ratio correction will cause some distortion in the image.

A significant benefit to me in using the Film & Video presets is that Photoshop also adds standard television boundary guides to a new document created from one of these presets.

**The inner region of guides is known as the Title Safe region. Keeping text inside this area should ensure that there'll be a little bit of margin around the text even if a television's overscan cuts off some of the outer edge of the picture.**

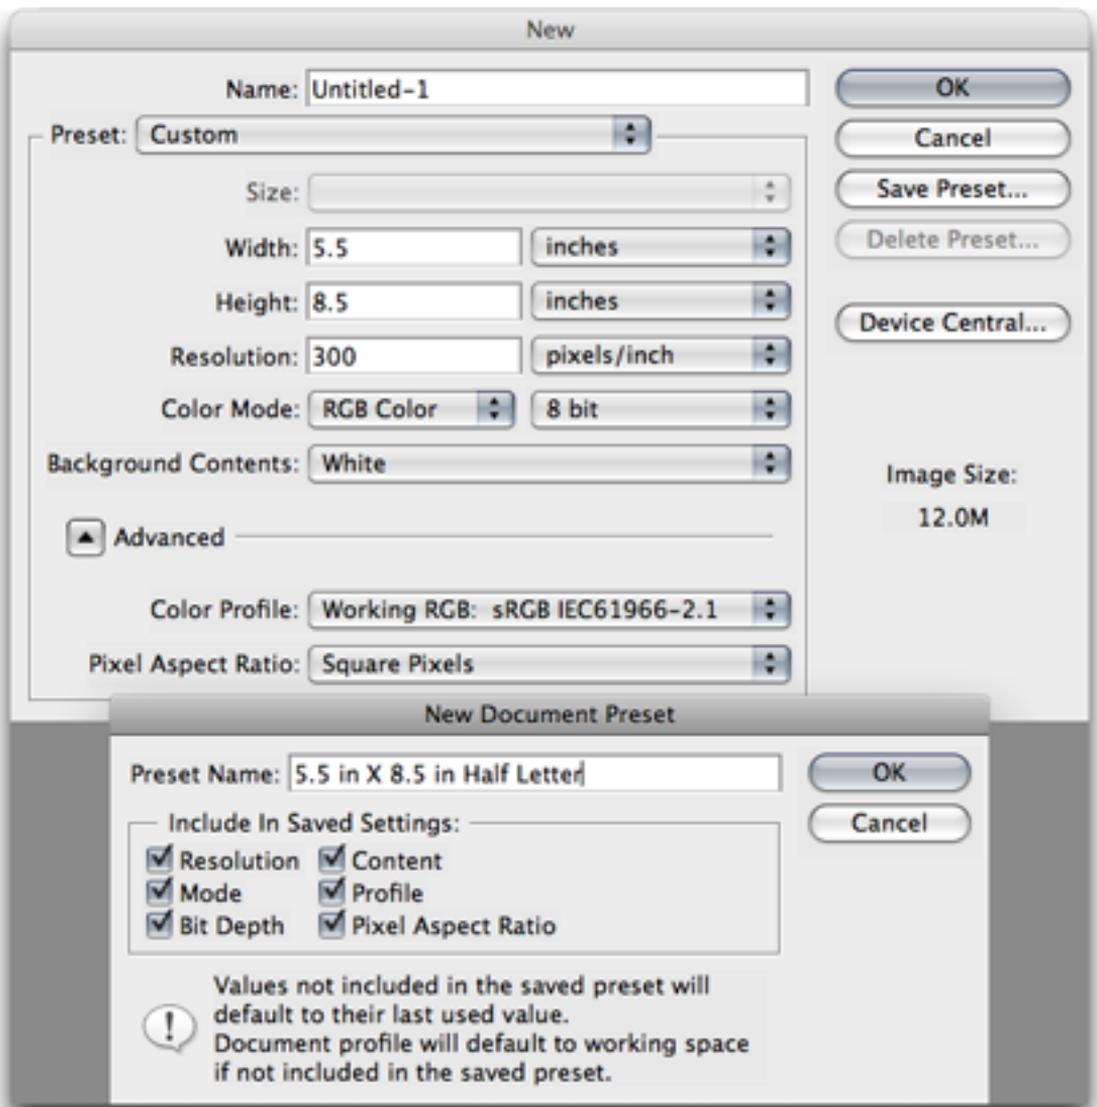

**The outer region of guides defines what is known as the Action Safe region. This boundary represents the edge of the visible screen for most tube-based television sets. Beyond this region is usually cut off by the over-scanned picture.**

These guides are helpful not only for video, but should also be considered when creating Keynote or PowerPoint documents.

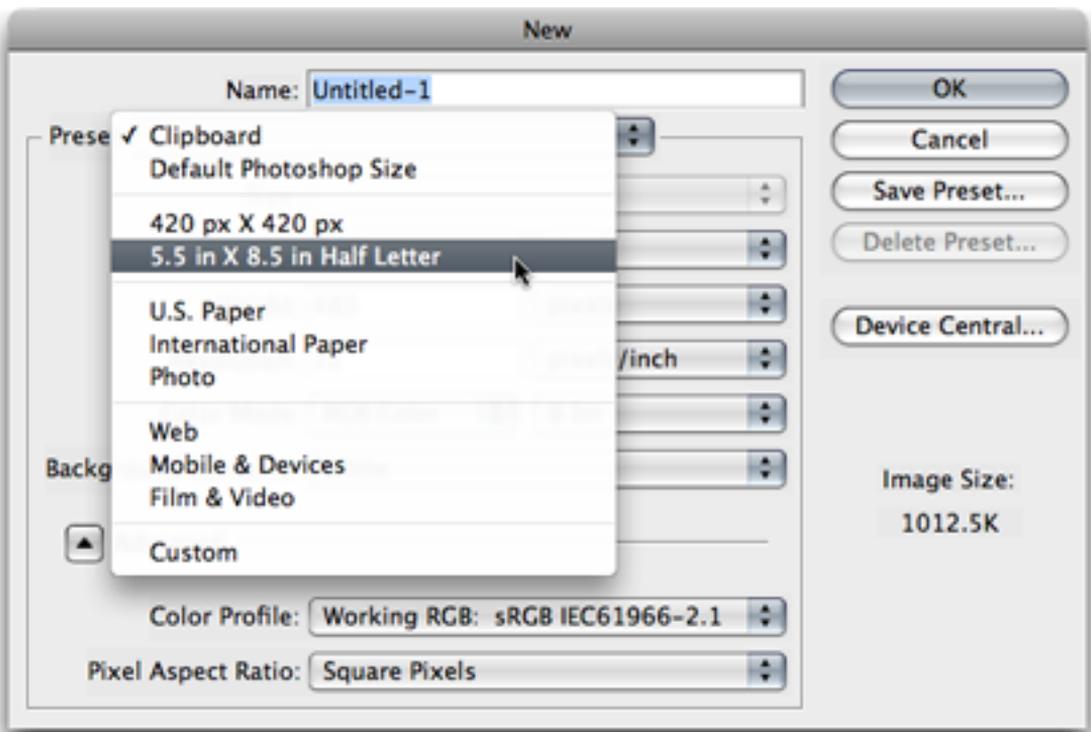

Even though Photoshop includes a lot of new document presets, a designer can create his or her own for frequently used configurations. For example, in the first screenshot above, there is a preset to create a square document at 420 pixels tall and wide. I created this preset because images in ATPM's articles are set to 420 pixels wide in most situations. I think images look better if I submit them at this width instead of letting ATPM's publishing engine scale them. So, in many months, I find myself creating numerous 420 pixel-wide Photoshop documents to accompany my articles, and this preset takes care of filling in those values, including the 72 pixel per inch setting.

Creating a new document preset is extremely easy, and I can even begin with an existing preset that is in the ballpark of the new preset I want to create. For example, in the US Paper preset, there are settings for Letter, Legal, and Tabloid sizes, but I often create flyers that are half of Letter size, and I wanted a preset for this.

First, I selected the Letter size of the US Paper preset, which filled in an 8.5 inch by 11 inch document at 300 pixels per inch. Next, I changed the dimensions to 5.5×8.5 inches. This creates a portrait-orientation document. If I want a landscape orientation, I can reverse the numbers to become 8.5 inches wide and 5.5 inches tall. Once I'm satisfied, I click the Save Preset button.

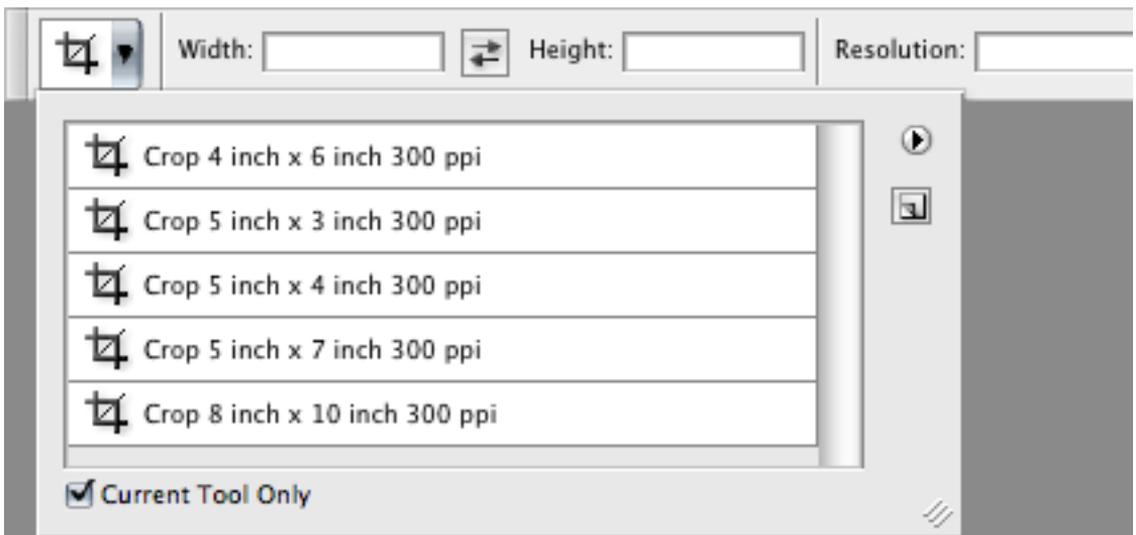

In the Save Preset dialog box, I provide a name for the preset, and can choose which settings should be included in the preset.

The next time I create a new document, I can choose my Half Letter preset. Note that the Size menu is only available when using built-in presets provided by Photoshop and is grayed-out when a custom user preset is selected.

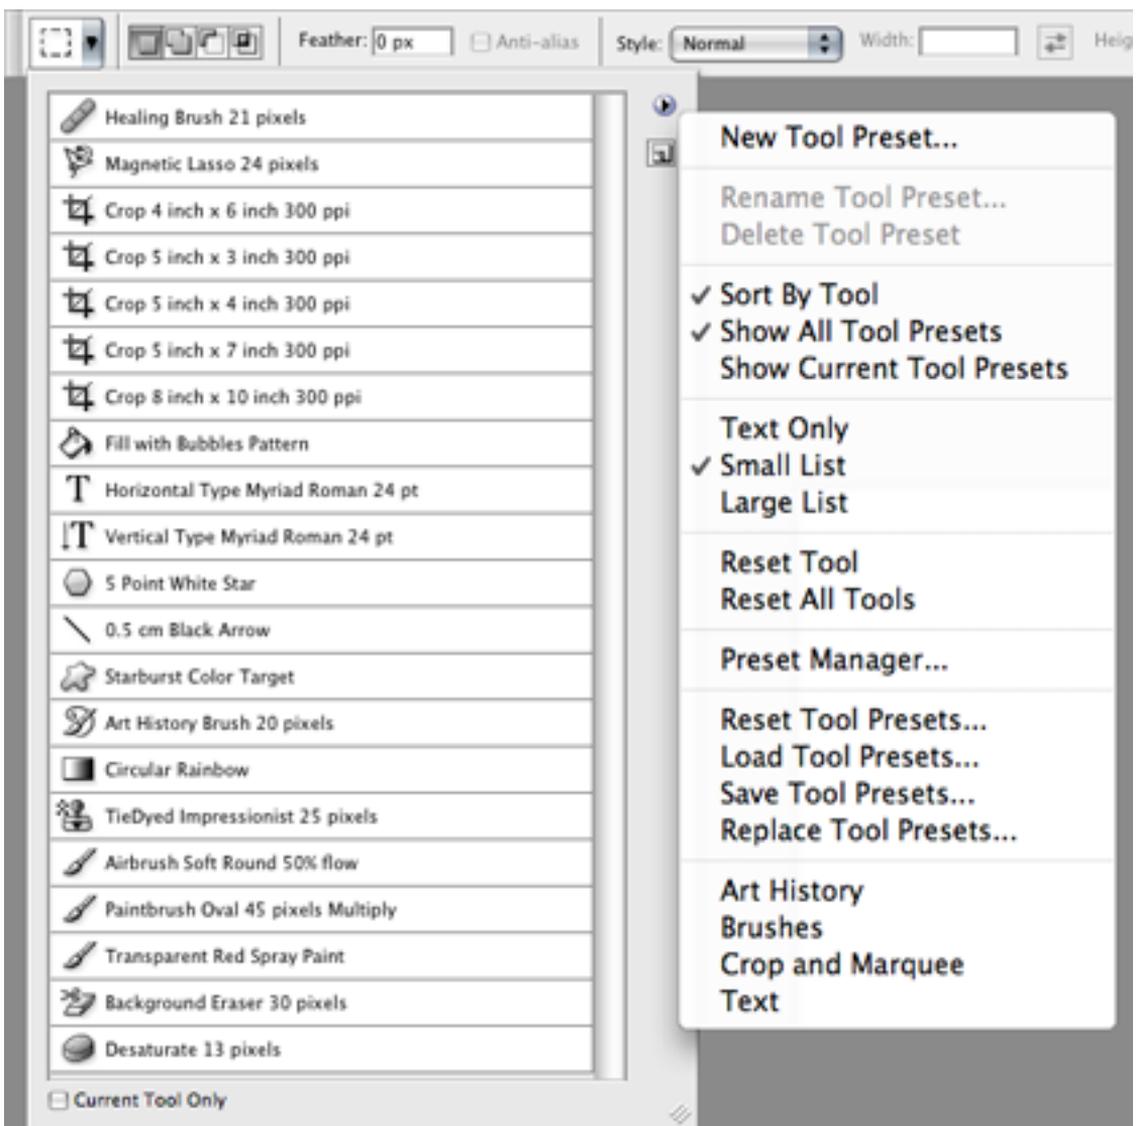

## Tool Presets

Just as presets can be created for new documents that are frequently used, presets can also be defined for Photoshop's tools. Tool presets can be found in the menu on the far left side of the Options bar.

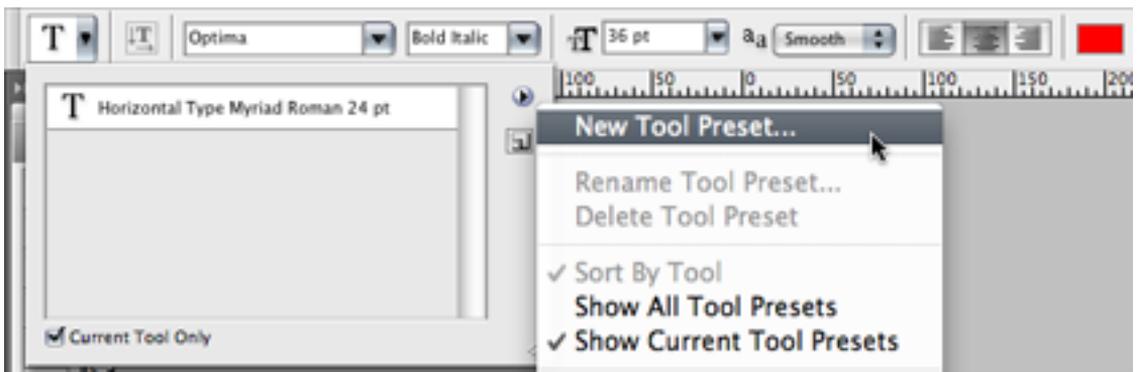

Presets for the Crop tool.

Note the checkbox at the bottom of the tool preset window. Unchecking it will provide a list of every tool preset that has been saved.

This screenshot shows all the default tool presets provided by Photoshop. Four categories of additional presets—Art History, Brushes, Crop and Marquee, and Text—are accessible from the palette menu.

Creating a custom tool preset is as easy as creating a new document preset. As before, I begin by defining the desired settings in the Options bar for the tool I'm using. For example, let's say I often need to add text that is 36 point Optima Bold Italic with smooth anti-aliasing, center justification, and red color. Rather than re-specify those settings if I had changed them for a different task, I can create a preset to immediately restore them.

Saving a Type tool preset after configuring my desired settings.

The Options bar changes for each Photoshop tool to provide settings for the selected tool. Any configuration made to a tool via the Options bar can be saved as a tool preset for later use.

## Homework Assignment

I have shared only two of the many places where Photoshop allows presets to be saved. There is a Preset Manager function under the Edit menu that reveals even more types of presets, but not all available presets are located here. Notice that the Preset Manager does not include new document presets.

This month's homework assignment is look for more places where presets can be defined. Here's a hint: search for keyword "preset" in the Adobe Help Viewer.

## South Korea and Guam

We need new desktop pictures each month. [Write](#) to us!

### This Month's Desktop Pictures

These photos were taken by ATPM reader Robert Foster. They include pictures taken this year of some summer and fall flowers of South Korea along with a photo of Guam along the southern part of the island. All images are copyrighted 2008 with all rights reserved. Sale of images is strictly prohibited in any form. Anyone wishing to sell said images must contact him and receive written permission to do so.

[View Pictures](#)

### Previous Months' Desktop Pictures

Pictures from previous months are listed in the desktop pictures [archives](#).

### Downloading All the Pictures at Once

Some browsers can download an entire set of desktop pictures at once.

**iCab** Use the Download command to download “Get all files in same path.”

**OmniWeb** Choose “Save Linked > Images...” from the File menu.

**Safari** Use [this Automator workflow](#).

### Contributing Your Own Desktop Pictures

If you have a picture, whether a small series or just one fabulous or funny shot, feel free to send it to [editor@atpm.com](mailto:editor@atpm.com) and we'll consider publishing it in next month's issue. Have a

regular print but no scanner? Don't worry. E-mail us, and we tell you where to send it so we can scan it for you. Note that we cannot return the original print, so send us a copy.

## Placing Desktop Pictures

### **Mac OS X 10.3.x through 10.5.x**

Choose "System Preferences..." from the Apple menu, click the "Desktop & Screen Saver" button, then choose the Desktop tab. In the left-side menu, select the desktop pictures folder you want to use.

You can also use the pictures with Mac OS X's built-in screen saver. Select the Screen Saver tab which is also in the "Desktop & Screen Saver" System Preferences pane. If you put the ATPM pictures in your Pictures folder, click on the Pictures Folder in the list of screen savers. Otherwise, click Choose Folder to tell the screen saver which pictures to use.

### **Mac OS X 10.1.x and 10.2.x**

Choose "System Preferences..." from the Apple menu and click the Desktop button. With the pop-up menu, select the desktop pictures folder you want to use.

You can also use the pictures with Mac OS X's built-in screen saver. Choose "System Preferences..." from the Apple menu. Click the Screen Saver (10.1.x) or Screen Effects (10.2.x) button. Then click on Custom Slide Show in the list of screen savers. If you put the ATPM pictures in your Pictures folder, you're all set. Otherwise, click Configure to tell the screen saver which pictures to use.

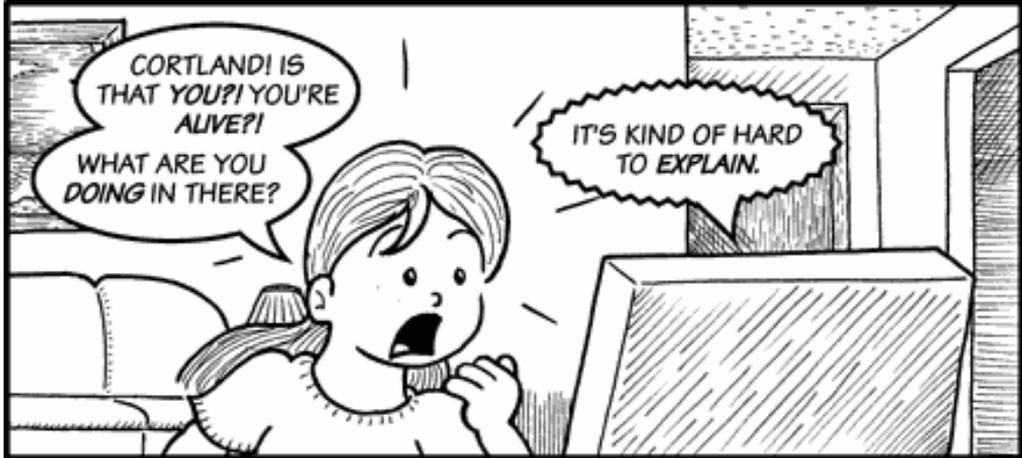

### **Mac OS X 10.0.x**

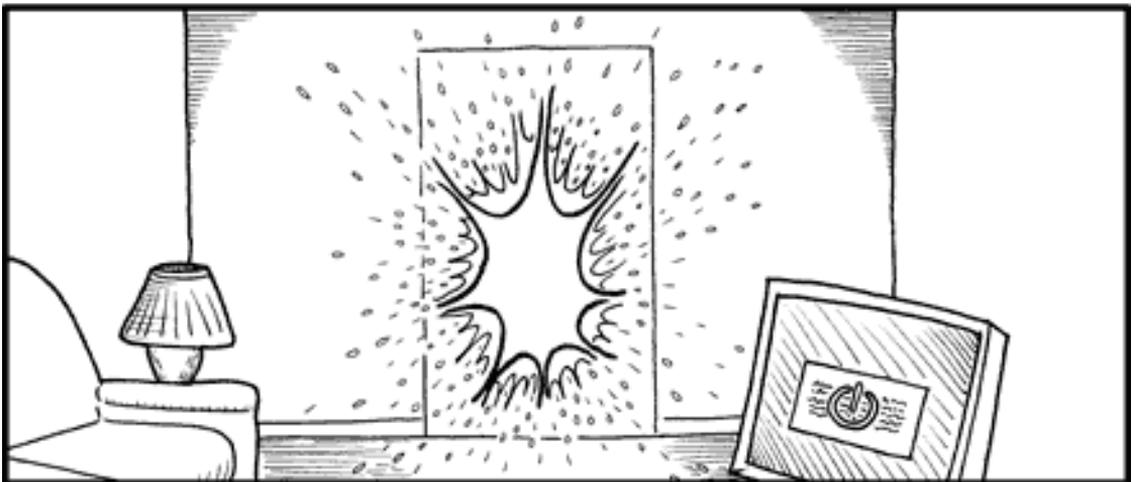

Switch to the Finder. Choose "Preferences..." from the "Finder" menu. Click on the "Select Picture..." button on the right. In the Open Panel, select the desktop picture you want to use. The panel defaults to your ~/Library/Desktop Pictures folder. Close the "Finder Preferences" window when you are done.

## Democracy 2

**Developer:** [Red Marble Games](#)

**Price:** \$23 (download); \$28 (CD)

**Requirements:** Mac OS X 10.4. [Universal](#).

**Trial:** Feature-limited (can't save game; turns are limited).

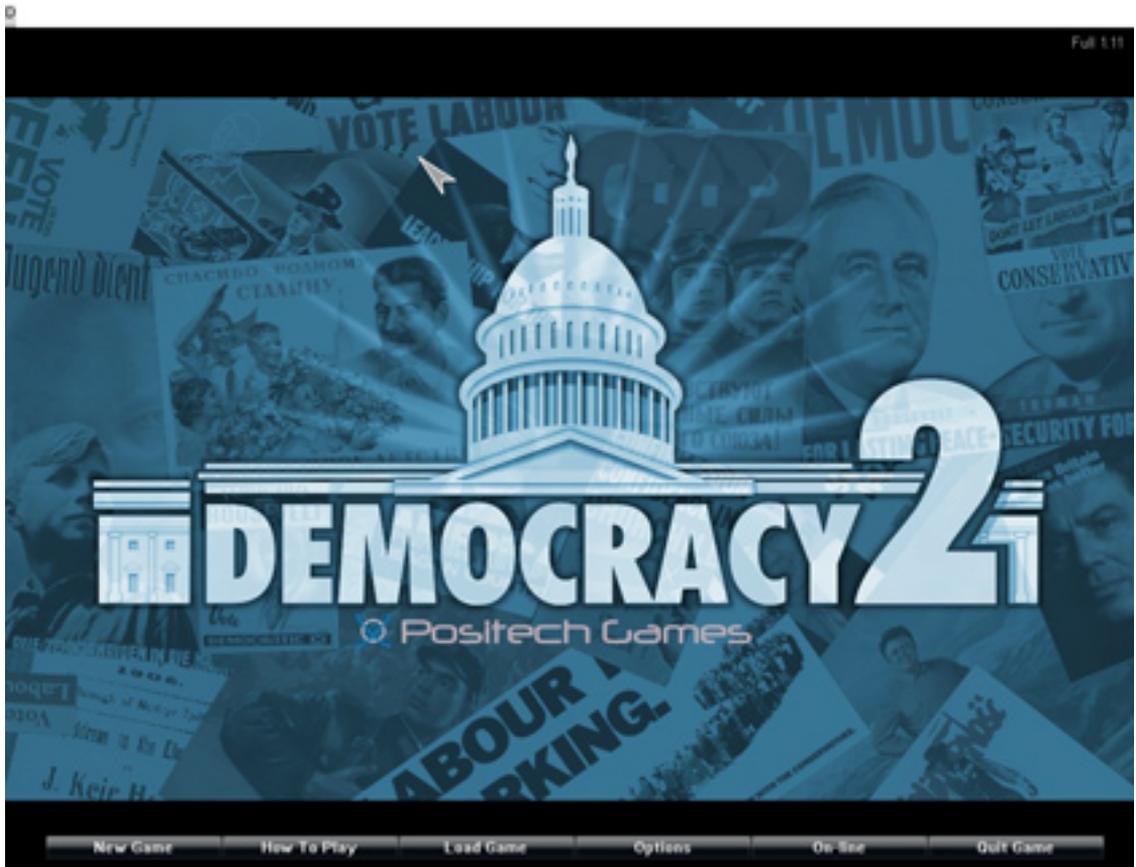

“Democracy forever teases us with the contrast between its ideals and its realities, between its heroic possibilities and its sorry achievements.” —Agnes Repplier

Democracy 2 is an interesting and challenging simulation game, putting you in charge of a nation. You make the decisions about transportation, public health, and the like, and you respond to specific dilemmas as they arise. Each turn is three months in the term of your prime ministership, and after a bit, you are up for re-election. Your goals are to please enough people to be re-elected, and, I suppose, also to run a healthy country.

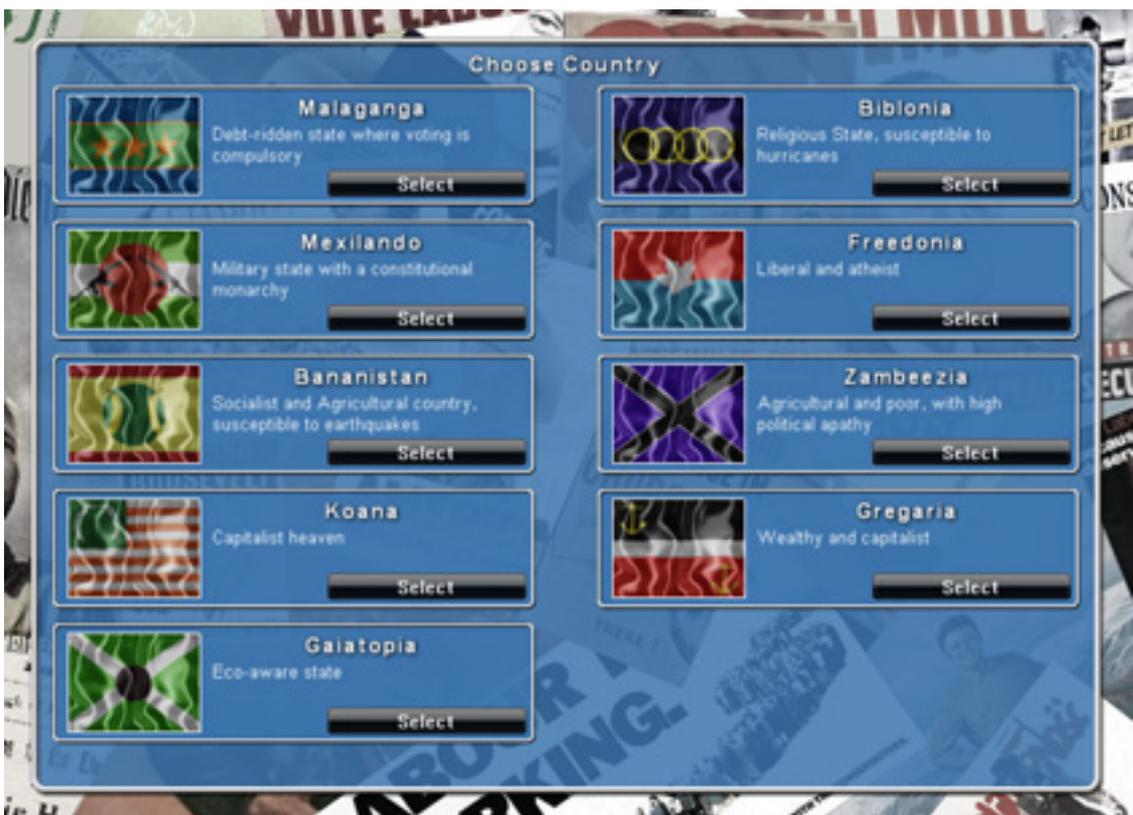

This was my first sim game, so I cannot compare it to others. From my vacuum, I enjoyed it very much. I liked that it rewarded players who have read a little psychology and a little warfare and a little science and a little ethics. I felt the thrill of the educated nonspecialist. This game made me feel like my education was worth something.

On the other hand, you could easily play it without any of that background, and have it be fun in some other way.

It takes all sorts.

Red Marble began by porting PC games to the Mac. Democracy was originally developed by Positech, a UK company. This explains the occasional British or Canadian references I ran into. They were not troublesome but charming, though I expected as ruler of Freedonia I would not see a mention of British royalty. But no harm.

For your first game, choose a political perspective you understand.

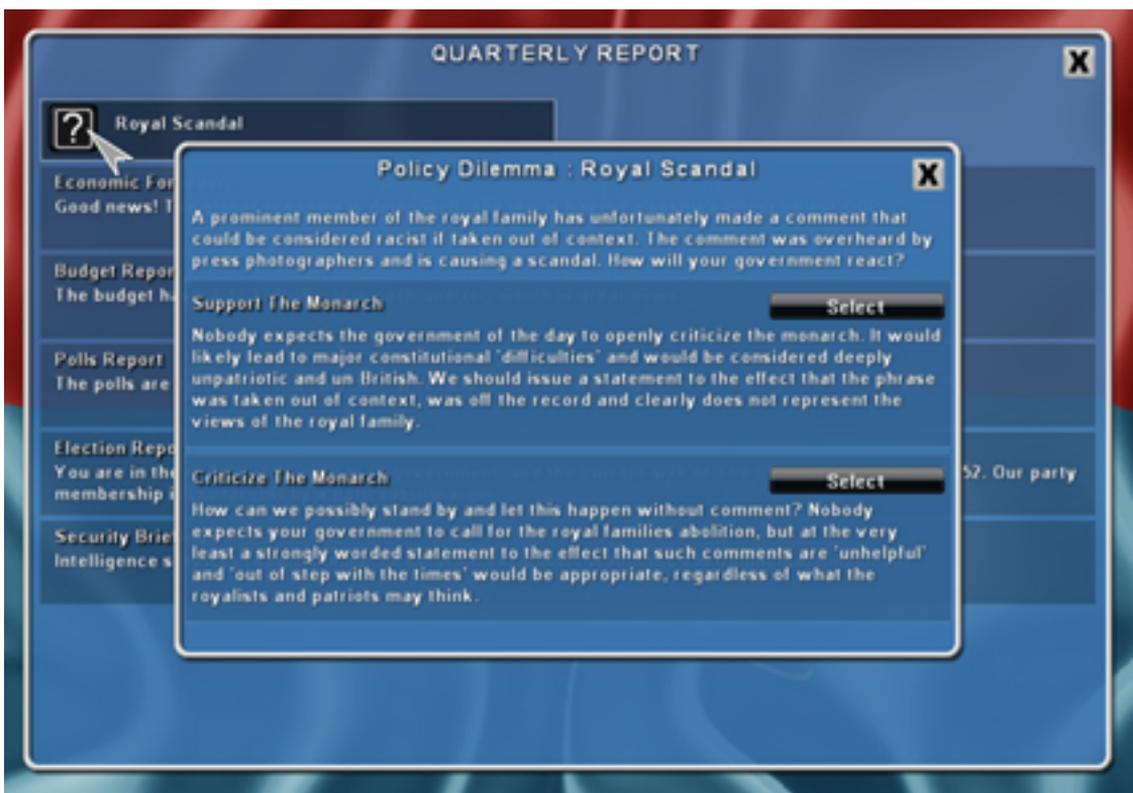

When you begin the game, you choose a country with a particular political style. I suggest going with a style you understand, whether or not you espouse it, because you will be able to make better decisions about what the people expect and want. You can't please all of the people all of the time, but if most of them lean a particular way, you can lean that way also.

I began with Freedonia, a liberal atheist state. I understand these positions, and thought I knew what policies would fit that approach.

The game opens with onscreen help, and there are tips throughout. Note: if you have a tip screen open, you must close it before you can do anything else.

You get some policy capital points each turn, and when you want to change a policy, it costs you. Sometimes you have to wait until you've been in office a while to accumulate enough goodwill to make the change.

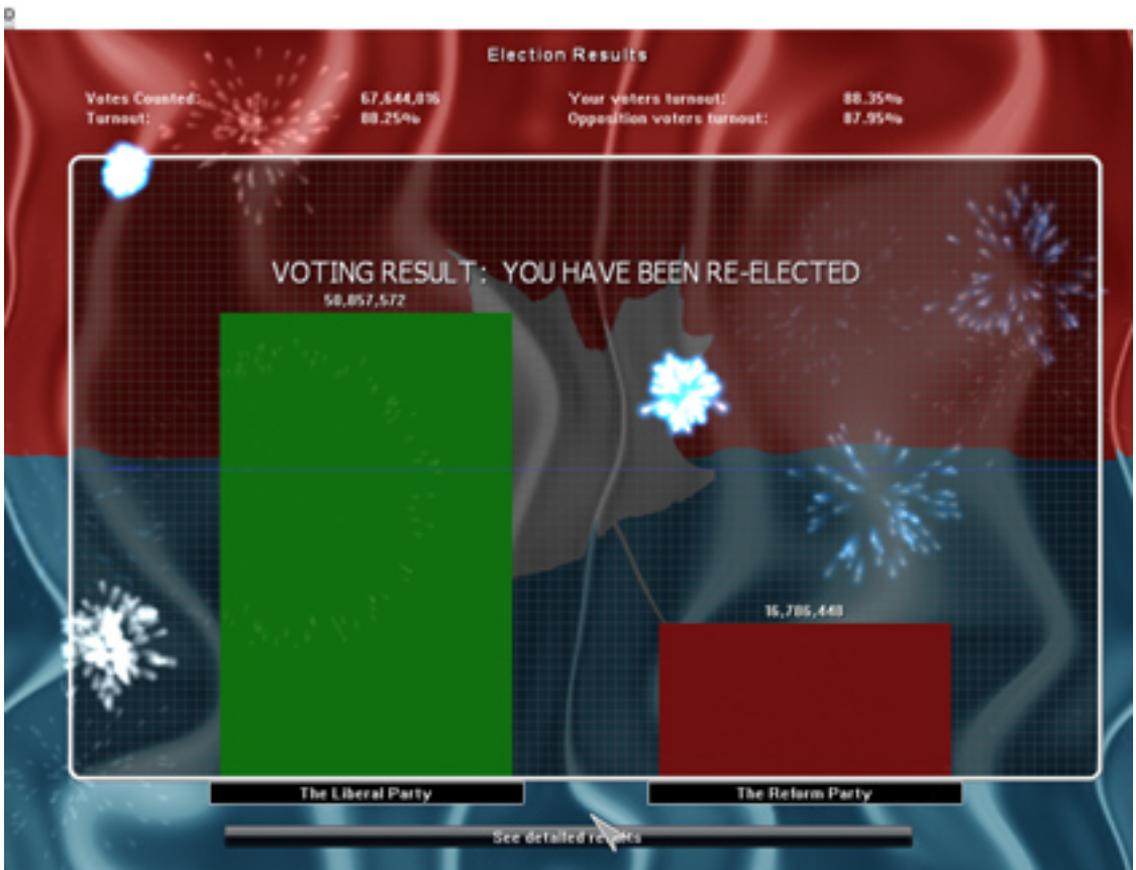

Every so often you'll be presented with a dilemma with two options, like this one where you must decide how to respond to a gaffe by a member of the royal family:

This was my first clue the game may have been written by someone British, which I loved once I saw it.

Most of the dilemmas are about topics such as immigration or biomedical laws. But it is the petty ones like this one that turn the voters against you, so pay attention!

You get three terms in the default setting, if you can win the re-elections. You get quarterly reports on various things, including the happiness of the voters. It's pretty cool when you are re-elected the first time and get the fireworks.

The fireworks are animated in the successful re-election notice.

By the end of my third term, I had wiped out most of the orange icons representing trouble spots. In my final act, knowing I was not up for re-election, I authorized a supersneaky spy network which did not fit the liberal state I was running. But it got my final approval ratings way high. . . .

Despite my having installed a tobacco tax on the final turn, even the smokers approved of me.

## Strengths

- The sheer joy of providing benefits and services to make imaginary peoples' lives better, and knowing what actions to leave alone because they don't fit the country's view.
- It's as fast or slow as you like, and you can save the game and return to it.
- Challenges from many aspects of the human condition: economics, welfare, healthcare, education, transportation, foreign relations, criminal justice.
- The game rewards you for understanding many aspects of contemporary life.

## Weaknesses, or, Some Stuff I'd Like

- Onscreen help or more suggestions.
- A way for two people to play the same scenario.

## Final Word

With no background in sim games, I would pay the \$23 for this one.

# Software Review

by Linus Ly, [illy@atpm.com](mailto:illy@atpm.com)

## Imprint Studio 1.0

**Developer:** [Axamblis](#)

**Price:** 15€ (about \$20 US)

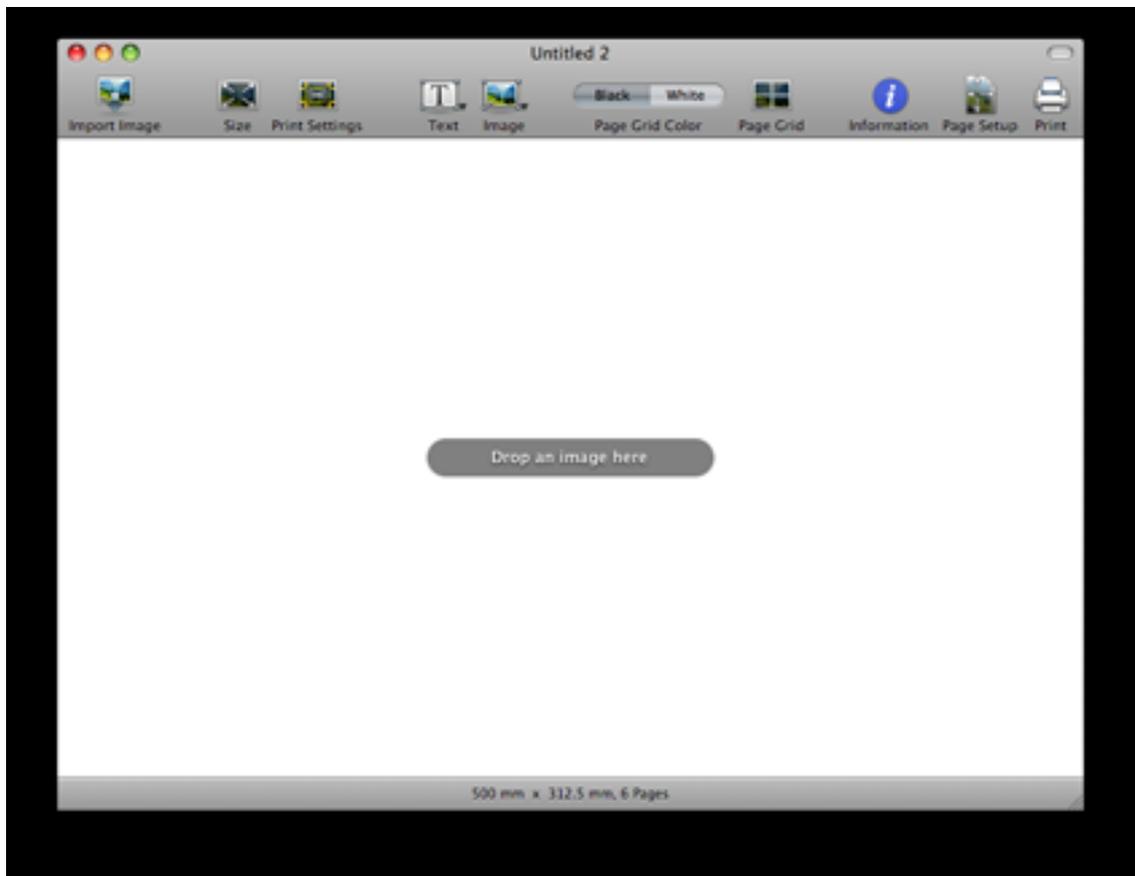

**Requirements:** Mac OS X 10.5. [Universal](#).

**Trial:** Feature-limited (limited to poster size of 60cm wide or high).

Years ago a friend of mine showed me his family tree as a “poster.” He happened to work in a CAD department and had access to a plotter. The tree looked great on one large sheet of plotting paper. Ever since then I have always wanted to be able to produce my own poster-size works. Money is definitely a problem, and living in the average Brooklyn home does not help. However, now with Imprint Studio, a color printer, a scissor, many rolls of transparent tape, and lots of time and patience, I too can make my own posters.

## Straightforward Usage

Start by dropping a picture onto Imprint Studio's window.

At startup, Imprint beckons you to drop an image onto it. With an image loaded and the mouse atop it, you see an overlaid grid along with controls for prepping the poster for printing. Using the current printer setting and a default size of 500mm (about 20 inches), Imprint gives you an idea of what the pieces of the poster look like. You can adjust the poster's width and height, with the constraint option to keep the two dimensions proportional or not. You can also add text or a picture to each of the four corners. The texts and pictures can be all different. To help you with the final assembly, Imprint lets you add crop marks and borders. Overlapped printing is another option to get a better poster. Last, you can save the poster with all the settings made.

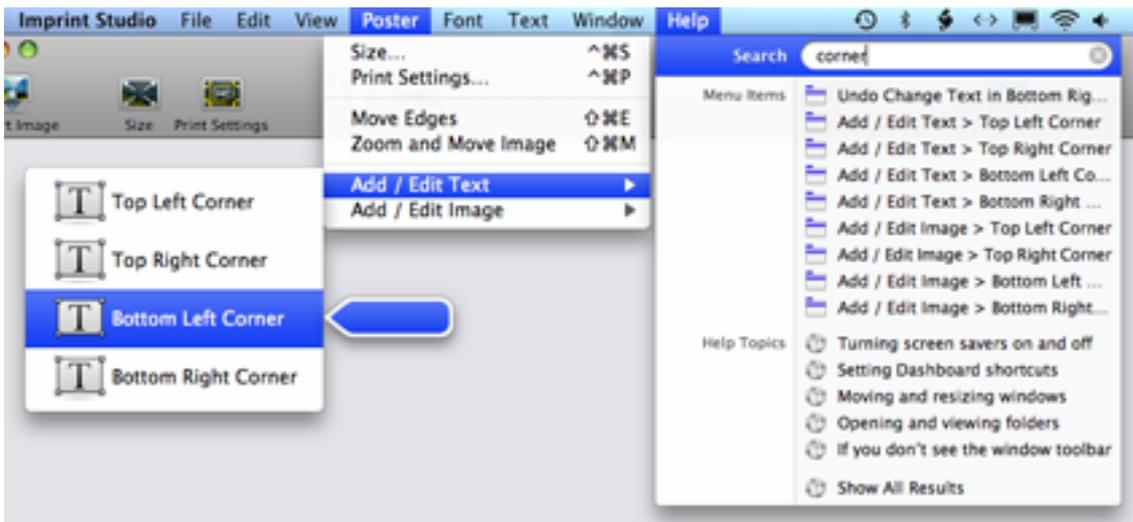

Imprint Studio's overlaid control and preview.

There is not much else to do but to print the poster. Hopefully you have a decent color printer to output to. Your cutting and taping skill will play an important role.

Imprint scales up the photo very well. Using a 4-megapixel photo, jaggedness appeared only when I produced a 64-page grid. The resulting poster was 2,000mm by 1,500mm, or about 7' by 5', so one would view it from a few feet away, from which distance the jaggies would not be so obvious.

## Minor Quibbles

While Imprint is a simple program that does just one thing really well, it can use improvements in some areas. The online help does not offer anything other than how to locate items in the simple menu tree. Whatever help topic you locate by entering text in the Search box will be about Mac OS itself, not Imprint Studio. I find that very annoying. It is true that the various windows and gadgets throughout the application come with their own few lines of help. The online help should at least repeat these if it cannot offer any additional information. I certainly could use some more information on the use of images in the four corners. I automatically thought the text would be used as titles or captions, but did not readily think an image could be a logo.

I don't need help locating the menu item to edit text in the corners.

Preferences is another area that can use some tweaking. Right now it only holds information about checking for updates and whether to install them automatically. I think users should be able to set the default size, use of constraint, crop marks, border, and unit of measurement. Even though I love to use more metric measurement, I don't want a piece of software to force me into using mm and cm when my mind still thinks in feet and inches. The unit of measurement can be changed on the fly, even if the menu is hard to see, but it would be nicer to set it once in the preferences.

In the wish list department, I think it would be helpful if Imprint Studio could generate an index of all the pages. When you have to trim the edges of sixty four pages and then tape them together, it is easy to have the pages mixed up. An index page showing a thumbnail view of the individual pages would help greatly with the laborious task.

## Conclusion

Imprint Studio makes it easy to produce the individual pages that are to be assembled into a poster, all with consumer-level printers. Its online help can use some help, and the preferences should store more useful information, but overall I think Imprint Studio is a Very Nice program.

## iPhone App Roundup

### Cannon Challenge 1.0

**Developer:** [Discovery Channel](#)

**Publisher:** [App Store](#)

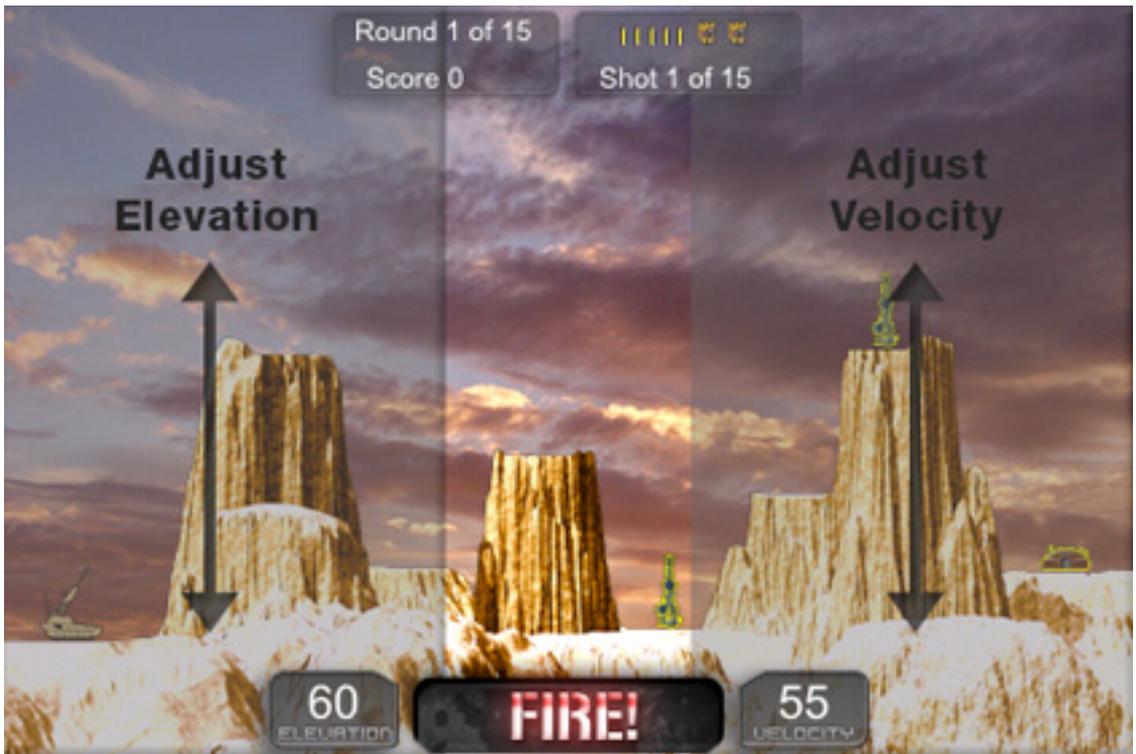

**Price:** free

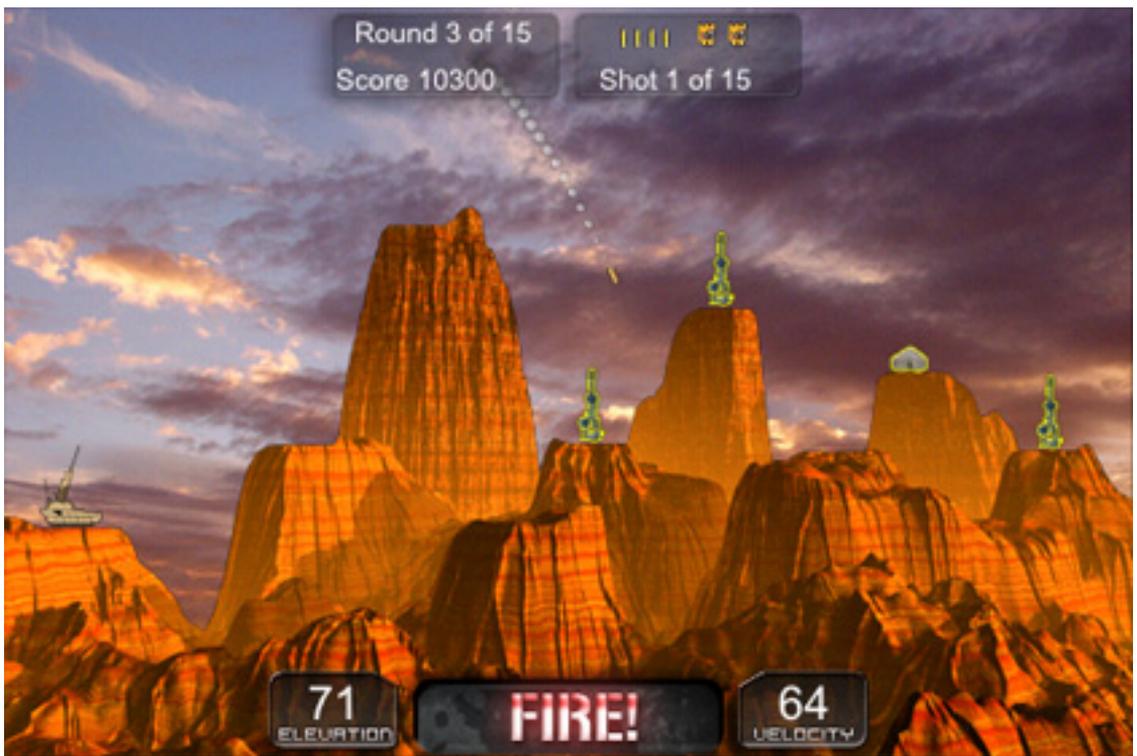

Fans of the old *Scorched Earth* game (and its variants) should appreciate *Cannon Challenge*, produced by the Discovery Channel. Admittedly, there's not a lot to this game. However, the mental exercise of angle and velocity calculation, combined with the attractive graphical scenes and the free price, makes *Cannon Challenge* a welcome addition to my collection of apps I reach to for brief diversions—translation: when I've had enough of Sudoku!

The object and execution is very simple. Just choose the angle at which you want to aim the cannon by scrolling up or down on the left side of the screen and how much power to

use by scrolling on the right side of the screen. You continue advancing through the levels by clearing all the targets before running out of shots. At higher levels, the timing of your shot becomes as important as your aim.

Since I used to love playing various forms of Scorched Earth, I'm accustomed to having a variety of weapons from which to choose. Cannon Challenge (at least in the levels I've managed to finish) only has one. Prior to the iPhone 2.1 OS update, the application crashed before it finished loading about half the time, but it has seemed pretty stable ever since I updated the iPhone OS. It still, however, requires a bit longer to load than virtually all other apps I use, probably because of the many photorealistic images used for each level. Lastly, don't plan on playing this game in a quiet room unless you have headphones. Even with the silent switch enabled, I found absolutely no way to turn off the rather loud sound effects. —*Lee Bennett*

## Earthscape 1.1

**Developer:** [Churchill Navigation](#)

**Publisher:** [App Store](#)

**Price:** \$10 (temporarily free at publication time)

The only reason I chose to download Earthscape was because it was offered free for a limited time. I must be clear to point out that Earthscape is *not* Google Earth on your iPhone, nor is it an alternative to the built-in Google Maps application. The primary feature of Earthscape is apparently to show pictures and Wikipedia articles that pertain to the area being viewed, but I don't necessarily feel I need a 3D Earth-viewing interface to use this feature.

Earthscape's other main feature—viewing aerial images of the Earth—is a haphazard and buggy implementation that is very difficult to use. There is no function for quickly honing to specific region (e.g. address, zip code, city, etc.) except for using Location Services to zoom in on your current position. Otherwise, all you can do is scroll around to different locations—a prospect that isn't as easy as it should be. It's far too easy to overshoot a scroll or zoom movement. Switching to 3D viewing mode is equally painful. Enabling 3D mode swings the viewing direction upward instead of swinging around whatever spot you are initially looking directly down upon. Once you're in 3D mode and realize you're not stuck in one position if you use two fingers to move around, be sure to look quickly at whatever you want to see. Chances are, the application is not far away from a crash. Indeed, it took me almost a half dozen relaunches just to get the 3D mode screenshot seen below, and it still isn't quite the view I was hoping to show. Yes, that means I gave up.

When Earthscape returns to its \$10 price tag, if its usability is in the same condition as it is now, it probably won't even merit the OK rating that I assigned for now. —*Lee Bennett*

## Edibles 1.3

**Developer:** [Random Ideas](#)

**Publisher:** [App Store](#)

**Price:** \$4

Ever since I started dieting, the most frustrating part has been tracking what I eat. With iPhone 2.x, however, I knew that it would only be a matter of time before the pieces fell into place.

The biggest piece of the puzzle is Edibles. If your diet requires a food log, chances are good that Edibles will be able to handle it. You catalog foods you eat, so you don't have to re-calculate points or carb units or whatever your system calls for. A recent update integrated a calculator (with the formula customized by the user), so it's even easier to build your catalog of foods. Exercise points, weekly and daily allowances, and an easy interface—this is the perfect points log. And, future plans include optional pre-populations of the database, which is probably the biggest complaint for some currently. At \$4, it's a bargain. —*Ed Eubanks, Jr.*

## Food IQ 2.1

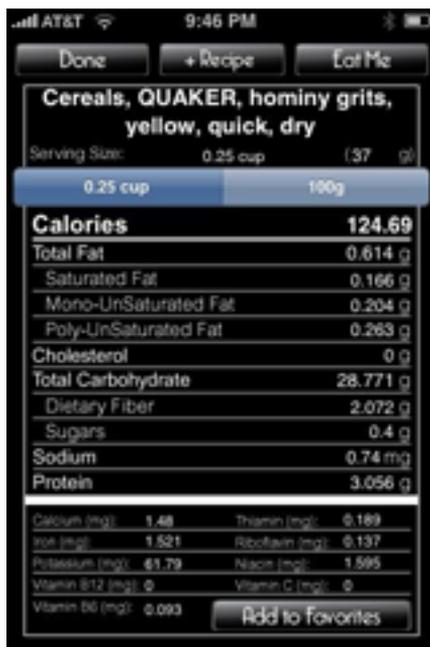

**Developer:** [Obsessive Code](#)

**Publisher:** [App Store](#)

**Price:** \$2

There are plenty of foods that aren't listed under the 25 restaurants featured in Restaurant Nutrition (review below)—and this is where Food IQ steps in and shines. With a database of over 7,500 listings, Food IQ has a lot of common foods as well as branded ones. You may also add your own to the list, making this database incredibly flexible.

It has comprehensive data about the food it features, offering nutrition information in a raw form (by the ounce, for example) as well as in common servings, and the data is presented in a familiar format. Once you've found the serving size you need, an "Eat Me" button allows you to view the number of points it is valued at, and also add it to a log—since Food

IQ has its own log and could function as an alternative or replacement to Edibles. There's a lot of application there, and it's a steal at \$2. —*Ed Eubanks, Jr.*

## Mobile Fotos 1.3

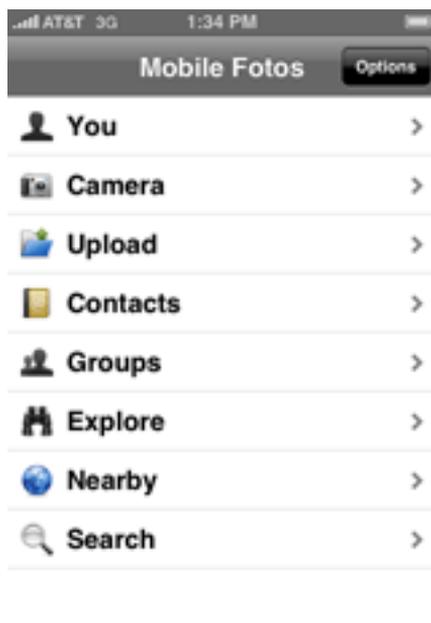

**Developer:** [XK72](#)

**Publisher:** [App Store](#)

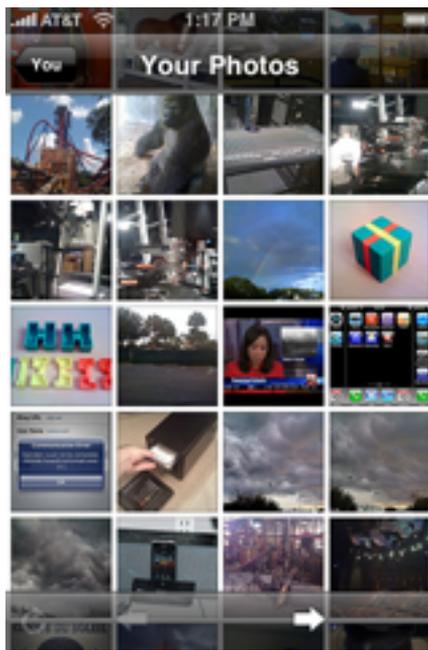

**Price:** \$3

Mobile Fotos (originally released as Mobile Flickr) is an outstanding iPhone application for manipulating a Flickr account. It provides a simple-to-use interface for browsing your own stream of photos, but the developer didn't stop there. Mobile Fotos also allows exploring the Most Recent and Interesting public photo stream, photos posted to Groups to which you belong, photos from your contacts, and photos taken within a specified radius of your current location. A complete photo search function is also included.

The browsing features alone make Mobile Fotos easily a bargain for \$3. Yet, there's a whole other side to the application in its well-done interface for uploading photos to your Flickr stream. Though there were serious bugs in the 1.0 release, the current version is probably about as close to a perfect mobile uploading tool as you can get. Photos can either be taken directly from within the application (and are saved to the Photo Library after uploading) or selected from photos already in the Library.

Flaws in the earlier iPhone OS versions (no fault of Mobile Fotos) displayed the preview of a photo taken by the application incorrectly, even though it uploaded properly, and did not allow greater than 640×480 resolution to be uploaded when selecting existing Library photos. Both of these issues are gone in the iPhone 2.1 OS.

Once a photo is taken or selected, Mobile Fotos offers fields to provide a title, description, and tags. In addition, you can optionally geotag a photo's location, select the privacy levels for who can see the photo, and add the photo to a set or a group.

In this reviewer's opinion, if you use Flickr to hold pictures taken from your iPhone, Mobile Fotos is an absolute must have. —*Lee Bennett*

## PointsCalc 1.0.1

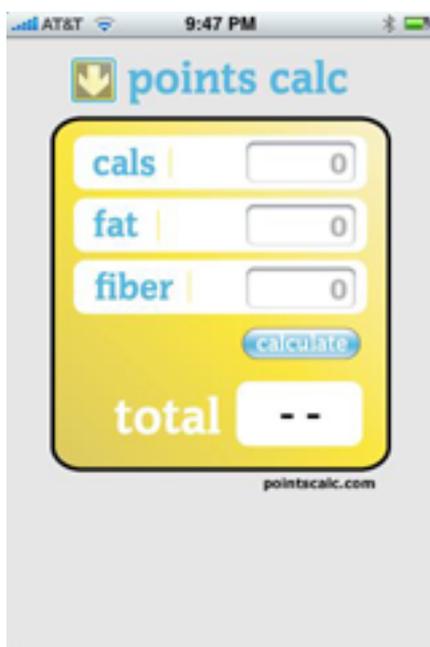

**Developer:** [Ization Technologies](#)

**Publisher:** [App Store](#)

**Price:** free

Before Edibles built a calculator into their application, I used PointsCalc frequently. It's not for every diet—it only calculates points based off of calories, fat, and fiber (the Weight Watchers formula). But it works great for what it does—and as a free application, the price is right. —*Ed Eubanks, Jr.*

## Restaurant Nutrition 1.3

**Developer:** [Foundation HealthCare Network](#)

**Publisher:** [App Store](#)

**Price:** free

When you're eating out, it can be tricky getting the nutrition information to calculate your points. That's where an application like Restaurant Nutrition comes in. With a catalog of 25 popular chain restaurants, there's a good chance you'll find what you're eating.

The great thing about Restaurant Nutrition is that it will give you all of the nutrition data for a serving. The downside is, it doesn't offer any help by way of points, so you have to remember (or write down) the values for your calculation and enter them elsewhere. The application also tends to crash on me—especially when I'm on the McDonald's page (Encouragement not to eat there? Maybe so...). Still, the application is free, so I can't complain too much. —*Ed Eubanks, Jr.*

## Trip Cubby 1.1.1

**Developer:** [App Cubby](#)

**Publisher:** [App Store](#)

**Price:** \$10

Like so many people, I need to track some of the mileage I put on my cars for business purposes. In fact, I have different types of mileage that I log: some of them are reimbursed, while others are filed as deductions on my tax returns. While there are a number of iPhone apps that offer these services, Trip Cubby has consistently gotten some of the best reviews in the App Store. After purchasing and using it for a few weeks, I can understand why: Trip Cubby stores a healthy amount of data in an easy-to-use interface.

| Tags      |          |                 |
|-----------|----------|-----------------|
| Odometer  | Start    | 178,534         |
|           | End      | 178,598         |
|           | Distance | 64              |
| Deduction | Type     | Business        |
|           | Rate     | \$0.585         |
|           | Amount   | \$37.44         |
|           | Paid     | No              |
| Time      | Start    | 9/15/08 4:28 PM |
|           | End      | 9/15/08 4:43 PM |

|           | Vehicle  | Isuzu Trooper   |
| Expenses  |          |                 |
| Notes     |          |                 |

Some of the best features: multiple drivers, multiple vehicles, tags, notes for each trip, options for additional expenses, frequently recurring trips can become templates, and automatic calculation of expenses. I can also export my log in a spreadsheet file and e-mail it to myself (or to the person responsible with reimbursing me). Trip Cubby is \$10, which is a little higher than the average iPhone application, but less than some of its competitors (even those with fewer features). If you need a mileage log, this one is a good one. —*Ed Eubanks, Jr.*

## Weight Tracker 2.2

**Developer:** [Foundation HealthCare Network](#)

**Publisher:** [App Store](#)

**Price:** \$1

The other part of the diet equation is tracking weight. There are several iPhone apps available to do this—I picked Weight Tracker. It has a very useable interface, and it keeps a log, along with some basic goal information. It calculates BMI, and will sync with several online weight tracking Web sites if you wish. I like that multiple users may log their weight in one iPhone/application, although we don't use that option at my house. Like many apps, it was free for a while—now it will cost you all of \$1. —*Ed Eubanks, Jr.*

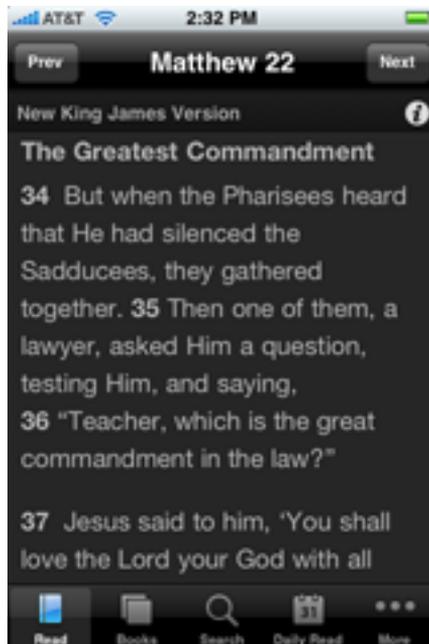

## YouVersion Bible 1.3

Developer: [LifeChurch.tv](http://LifeChurch.tv)

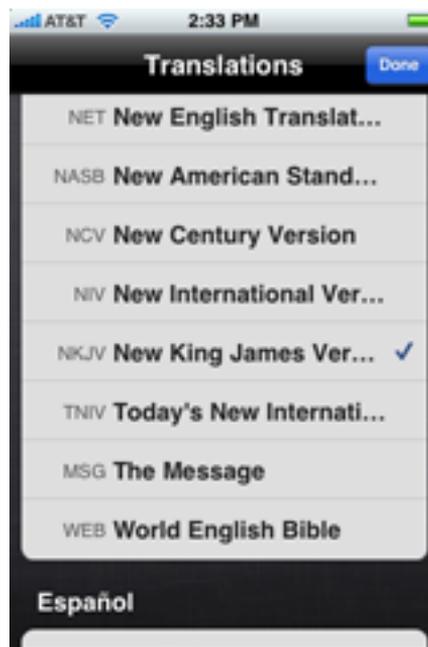

Publisher: [App Store](#)

Price: free

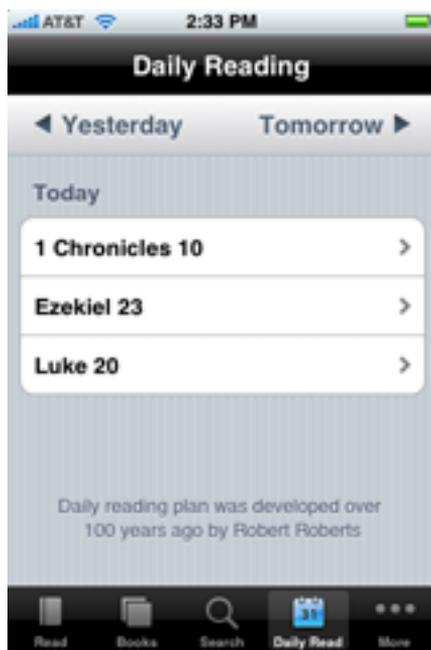

While I'm not one of these people who spends every possible second with my nose buried in scripture, I am affiliated with a number of groups and production projects that benefit both myself and others if I have the ability to look up a Bible passage. The problem is, I've never been one to keep a Bible somewhere that I can easily access. That's where the YouVersion Bible comes to the rescue. This application offers the complete Bible in 14 English-language translations and 21 translations in other languages. Many of the translations can also be downloaded for offline reading—something that would be especially helpful to iPod touch owners when not in range of Wi-Fi. The toolbar is customizable to offer quick access to your favorite features—for me, that's the reading mode, direct book selection, search, and daily read.

There's only one feature I feel is missing and keeping the application out of the Excellent rating category—bookmarks. I don't need to say more. YouVersion Bible needs this feature, period.

Even still, the application helps bring scripture into the 21st century by giving no iPhone or iPod touch owner an excuse not to have a Bible available to them. —*Lee Bennett*

## Whoomp Earbud Enhancers

**Developer:** Hearing Components

**Price:** \$20; \$12 for replacement tips.

**Trial:** None

It's no secret that lots of people hate the stock headphones that Apple includes with the iPod. Complaints have run the gamut, including among others, weak bass response, tinny audio, and poor fit.

My biggest personal complaint with them is their inability to stay in place while I'm running, a problem only partially solved by the easily lost foam-mesh covers included in the earbud package. And, as with many earbud-style headphones, Apple's headphones don't do a great job of isolating the listener from external sounds (for instance, an airplane's engines).

Hearing Components developed the Whoomp Earbud Enhancers to solve all of the aforementioned problems. Let's see how well it succeeded.

The Whoomp Earbud Enhancers slip over the stock Apple earbuds, providing a soft foam earpiece that holds the earbuds securely in place.

While it's not possible for an external add-on to change the acoustic properties of the speakers themselves, by blocking outside noise, the Whoomp enhancers do allow the Apple earbuds to deliver sound directly into the ears. To my ears, the bass was less muffled and the treble more subdued. For people whose primary complaint with the Apple earbuds is their weak bass response and/or their overly bright treble, this seems like a good solution.

However, I thought the overall sound suffered somewhat when listening to music with a large dynamic range (classical, for example), particularly in the higher frequencies. I suspect the foam tips are absorbing some of the energy of the music, and there's not a lot the Whoomps can do to avoid that.

The Whoomps do a great job of holding the earbuds in place. I haven't had any problems running with them, whereas I had to reset the bare earbuds about every mile or so. The foam, however, is somewhat absorbent of perspiration and earwax, and I can definitely tell I've worn mine off and on for a couple of months now. For \$20, I expect a product not advertised as disposable to last a little longer than that, and I expect the replacements to be a lot cheaper than \$12 per pair.

The fit, while generally good, is far from perfect. Some injection-molding flashing remains on the plastic and, at least in my case, it digs into my ears after awhile. Sure, I can trim it off with a knife—and I will—but this is reflective of poor quality control and again, for \$20 I expect better.

You can see a small nub at about the one o'clock position that causes discomfort after wearing the "enhanced" earbuds for awhile.

Sound isolation compared to the bare earbuds is vastly improved. I travel a great deal on airplanes, and bulky noise-reducing headphones are simply not an option most of the time. The stock earbuds do an OK job, but when you end up in a window seat over the wing on an MD-82 and have to listen to not only the airflow noise in cruise (which is substantial) but also the drone of the engines, turning up the iPod to drown out that noise gets downright dangerous. The Whoomps allow a much more comfortable and reasonable volume level, though I have used similar devices in the past that did a better job of sound isolation. There's definitely room for improvement.

A carrying case is included in the "starter pack" that you get for \$20, along with a second pair of Whoomps with smaller ("slim") tips on them. The carrying case is a particularly nice touch for frequent travelers, as headphone cords have a tendency to get horribly tangled if you simply toss your earbuds in a backpack. The case is big enough to carry a pair of earbuds with Whoomps attached, along with the second pair of Whoomps (or a couple of pairs of replacement tips).

The Whoomp Earbud Enhancers will enhance your stock Apple earbuds, yes. They improve the fit and the sound isolation at some minor expense of audio quality and come with a nice carrying case, but \$20 seems awfully steep (and halfway toward a pair of really good

earbuds with none of the problems) for what amounts to disposable earplugs with holes. Save your money and buy a better pair of earbuds in the first place rather than trying to jury-rig a pair you aren't crazy about.

# FAQ: Frequently Asked Questions

## What Is *ATPM*?

*About This Particular Macintosh* (ATPM) is, among other things, a monthly Internet magazine or “e-zine.” ATPM was created to celebrate the personal computing experience. For us this means the most personal of all personal computers—the Apple Macintosh. *About This Particular Macintosh* is intended to be about your Macintosh, our Macintoshes, and the creative, personal ideas and experiences of everyone who uses a Mac. We hope that we will continue to be faithful to our mission.

## Are You Looking for New Staff Members?

ATPM is looking to add more regular reviewers to our staff. Though all positions with *About This Particular Macintosh* are volunteer, reviewing is a great way to share your product knowledge and experience with fellow members of the Macintosh community. If you're interested, contact ATPM's Reviews Editor, [Paul Fatula](#).

## How Can I Subscribe to *ATPM*?

Visit the [subscriptions page](#).

## Which Format Is Best for Me?

- The **Online Webzine** edition is for people who want to view ATPM in their Web browser, while connected to the Internet. It provides sharp text, lots of navigation options, and live links to ATPM back issues and other Web pages.
- The **Offline Webzine** is an HTML version of ATPM that is formatted for viewing offline and made available in a Mac OS X disk image. The graphics, content, and navigation elements are the same as with the Online Webzine, but you can view it without being connected to the Internet. It requires a Web browser.
- The **Print PDF** edition is saved in Adobe PDF format. It has a two-column layout with smaller text and higher-resolution graphics that are optimized for printing. It may be viewed online in a browser, or downloaded and viewed in Apple's Preview or Adobe Reader on Macintosh or Windows. PDFs may be magnified to any size and searched with ease.
- The **Screen PDF** edition is also saved in Adobe PDF format. It's a one-column layout with larger text that's optimized for reading on-screen.

## How Can I Submit Cover Art?

We enjoy the opportunity to display new, original cover art every month. We're also very proud of the people who have come forward to offer us cover art for each issue. If you're a

Macintosh artist and interested in preparing a cover for ATPM, please e-mail us. The way the process works is pretty simple. As soon as we have a topic or theme for the upcoming issue we let you know about it. Then, it's up to you. We do not pay for cover art but we are an international publication with a broad readership and we give appropriate credit alongside your work. There's space for an e-mail address and a Web page URL, too. Write to [editor@atpm.com](mailto:editor@atpm.com) for more information.

## How Can I Send a Letter to the Editor?

Got a comment about an article that you read in ATPM? Is there something you'd like us to write about in a future issue? We'd love to hear from you. Send your e-mail to [editor@atpm.com](mailto:editor@atpm.com). We often publish the e-mail that comes our way.

## How Can I Contribute to ATPM?

There are several sections of ATPM to which readers frequently contribute:

### ***Segments: Slices from the Macintosh Life***

This is one of our most successful spaces and one of our favorite places. We think of it as kind of the ATPM "guest room." This is where we will publish that sentimental Macintosh story that you promised yourself you would one day write. It's that special place in ATPM that's specifically designated for your stories. We'd really like to hear from you. Several Segments contributors have gone on to become ATPM columnists. Send your stuff to [editor@atpm.com](mailto:editor@atpm.com).

### ***Hardware and Software Reviews***

ATPM publishes hardware and software reviews. However, we do things in a rather unique way. Techno-jargon can be useful to engineers but is not always a help to most Mac users. We like reviews that inform our readers about how a particular piece of hardware or software will help their Macintosh lives. We want them to know what works, how it may help them in their work, and how strongly we recommend it. Please contact our [reviews editor](#), before you begin writing, if you have a piece of hardware or software that you'd like to review.

## Which Products Have You Reviewed?

Check our [reviews index](#) for the complete list.

## What is Your Rating Scale?

ATPM uses the following ratings (in order from best to worst): Excellent, Very Nice, Good, Okay, Rotten. Products rated Good or better are ones that we recommend. Okay products get the job done. We recommend avoiding Rotten products.

## Will You Review My Product?

If you or your company has a product that you'd like to see reviewed, send a copy our way. We're always looking for interesting pieces of software to try out. Contact [reviews@atpm.com](mailto:reviews@atpm.com) for shipping information. You can send press releases to [news@atpm.com](mailto:news@atpm.com).

## Where Can I Find Back Issues of *ATPM*?

[Back issues](#) of *ATPM*, dating since April 1995, are available in DOCMaker stand-alone format and as PDF. In addition, all issues since *ATPM* 2.05 (May 1996) are available in HTML format.

## What If My Question Isn't Answered Above?

We hope by now that you've found what you're looking for (We can't imagine there's something else about *ATPM* that you'd like to know.).
